## Weekly Coal Production

Production for Week Ended: June 13, 1987

## Highlights

U.S. coal production in the week ended June 13, 1987, as estimated by the Energy Information Administration, totaled 18.0 million short tons (bituminous coal and lignite, 17.9 million short tons; Pennsylvania anthracite, .09 million short tons). This was 4.7 percent lower than in the previous week, and was 3.3 percent higher than production in the corresponding week of 1986.

Cumulative U.S. coal production from January through June 13, 1987, was estimated at 396.1 milli short tons, 4.2 percent below the 413.3 million shot tons produced in the comparable period in 1986.

The methodology used to make weekly estimates of corproduction was published in the Weekly Coal Prodution (DOE/EIA-0218(86/35)), released for publication September 8, 1986.
